ONE

## **RELEASE NOTES**

## 1.1 Release 1.6.1

Patch level (bug fix) release.

## 1.1.1 Issues fixed in this release

- 306 : /etc/decisionengine/decision\_engine.conf as shipped in RPM is wrong format (de0aef3)
- 275 : Running de-client –stop-channel <channel> results in KeyError (59fb44e)

### 1.1.2 Full list of commits since version 1.6.0

d7ccd8a: doc: fix typo

ac48e50: updated release notes

de0aef3: Fix name to match expectations (#305)

59fb44e: postgresql: do not print stack trace for low level library (#309) (#310)

2162bbe: Setuptools uses entry return value as an error msg (#308)

b0fd9fb: 1.6.0 package backports (#302)

## 1.2 Release 1.6.0

## In this release:

- The logic engine has been rewritten in pure python. This removes the last C++ dependency the decision engine had. The build system has been updated accordingly.
- Migrated to setuptools package development library. This build system is the standard vanilla python build system
  provided with the python distribution. Build configurations have been updated and rpm packaging remains the
  primary distribution method.
- Completed logging implementation.
- Improvements in error handling and code coverage.
- Improvements in Jenkins and GitHub actions CI/CD pipelines.

## 1.2.1 Issues fixed in this release

- 44 : Logic Engine doesn't handle missing values gracefully (743effc)
- 253: Decision engine can sometimes start up at boot time before network name resolution is working (ae04db5)

## 1.2.2 Full list of commits since version 1.5.0

```
2551e07: More coverage for de-client (#296)
dde3945: Make sure actions either complete in time or die (#295)
381861c: Update Jenkins pipeline configuration (#292)
eb771f4: Try to cleanup Dockerfile PATH issue (#291)
780cb56: fix unittest doc
8680942: update unittest documentation
8154b24 : Fixup sphinx doc (#290)
5f7e13a: enhancements in logging and error handling in dataspace dir (#283)
3d92725 : Add missing runtime requirement (#286)
743effc: Allow conversion from errors to false values in logic-engine expressions. (#284)
124dcab: Inherit version from setuptools_scm if possible (#287)
3669803: added missing "" as line continuation
761f1d9: Drop invalid init.py
dc0e71b: migrate to setuptools (#264)
3b6f1bf: Make reaper reset state when starting from stopped proc (#280)
b2f9061: added ISO-8601 format to time in logging, changed name of function for better clarity. (#279)
0a74fe1: Improved DE client usage (#281)
ebf53e3: Added shutdown method to Publisher class (#278)
f95ab6d: Address some flake8/black reports (#274)
1c383b7: Automatically pull in our settings from about.py (#273)
e71f186: logging and error handling enhancements to taskmanager directory (#277)
7de9ab9: Increase Reaper log verbosity (#267)
019d245: Update actions to follow new best practices (#272)
b84e847 : Avoid possible sync issues in reaper startup (#271)
891975f: Remove vestigial C++ files. (#270)
42e5e1f: enhancements in logging and exception handling in newly added logicengine files (#265)
38effe6: Ensure the scheduler has started the thread before returning (#269)
db54fa1 : Start testing on PyPy with psycopg2cffi (#223)
cc44058 : Squashed commit of the following: (#263)
d6548e9: Enhanced logging in the logicengine directory files (#261)
```

c341bf7: Better match our workflow with codecov (#260)

1fbe44d: Use 'new' syntax for forward compat (#259)

2294b0b: Do a limited pin on version requirements (#256)

bcda470: Python implementation of logic engine (#246)

c6721b4: address comment on RB

ae04db5: Add Wants and After (network-online.target) dependency

1a96b14 : Fix action repodata a70cee8 : Move to CodeCov.io

7b16b4e: Add Wants and Requires dependencies (#258)

76c3670 : Move to CodeCov.io (#254)

e7ba013: Fix action repodata (#255)

d7e72f2: revert 3.9 test

b04154b: added 1.5.0 release notes

a03da29: remove 3.9 to see if documentatoin gets generated

## 1.3 Release 1.5.0

### In this release:

- Introduce data product query interface
- Cleanup of Ligic Engine code
- · Improvements in error handling
- Improvements in testing and CI

## 1.3.1 Issues fixed in this release

- 217, 218: Add option to de-client –print-product to only print the column names in a data block and-or to print one or more records in key/value format (fe7abcf)
- 240 : Logic Engine call leads to immediate taskmanager segfault exit (d855aa0)
- 239: implement data product browsing interface (fe9faa9)

## 1.3.2 Full list of commits since version 1.4.1

d66c54b : Add PEP-0396 metadata (#243)

bfc91a6 : More compat between psycopg2/psycopg2cffi (#248)

f5d31a6 : Cleanup Fixture FIXME (#249)

Odfaf3c: Adding docker documentation (#251)

4b166a2 : Since we are python3 only now, drop python-six compat layer (#252)

fe7abcf: Add format support to de-client (#217) (#241)

1.3. Release 1.5.0 5

```
df5a3d7: Add wheel support for easier testing (#247)
7de970d: Add place to inject env if need be (#242)
84e2930 : Fix race in test case (#250)
d855aa0: Fix fact-lookup to support duplicate names in separate rules. (#245)
51370fb: Resolve fixture 'quickstart' issue (#238)
3ea9129: Move from TravisCI to raw actions (#235)
fe9faa9: implement data product browsing interface (#239)
cf0f3c0: Add support to use custom base docker container to run tests (#234)
d91722f: Compat with psycopg2cffi (#233)
7d15a8c: Test failing source proxy. (#232)
b9a4bbb: Add debug logs for which threads are created #176 (#231)
6e6f4c9: Updated Jenkins configuration documentation (#229)
2d9fd7b: Log if config passed validation #117 (#230)
60c46d3: Self-test needs a real namespace to 'import numpy' in new python eval (#228)
a120077: Test that the doc actually builds during CI (#227)
4b6240a: Extend timeout for coverage combine (#226)
b059696: Update workflow per changes at github (#225)
7a71cac : Use newer compilers/runtimes (#224)
15ffd93: Add header for strict includes (#222)
71b141a: Add special PyPy only requirement (#221)
9dbb932 : Move Python C extension to versioned .so file (#220)
ea7ade5: Migrate from boost-python to pybind11 (#215)
e6b2eae: Add python 3.9 to testing matrix (#219)
04c8f9c: Add the option to print columns types on de-client (#216)
8815dc6 : Logic-engine cleanups (#211)
086d0d5: fix missing back tick
54cc084: modified release notes
24744cf: Synchronize access to the task managers (#214)
87a7fda: replde dash with underscore
743d0fd: try sphinx_rtd_theme
18c7909: added 1.4.0 release notes
ff3d491: force docker pull when building the docker container to make sure to use an updated base layer (#210)
```

## 1.4 Release 1.4.1

## In this release:

• Bug fixes to 1.4.0 release

## 1.4.1 Issues fixed in this release

• 213: de-client hangs under certain circumstances in version 1.4 and greater (race condition) (84ecfe2)

### 1.4.2 Full list of commits since version 1.4.0

```
9799b9a: update release version to 1.4.1
```

84ecfe2: Synchronize access to the task managers (#214)

751b6b8 : Address data races; remove need to sleep in unit tests (#205)

## 1.5 Release 1.4.0

#### In this release:

- Improvements in error handling and client/server interactions
- · Added log rotation by time

fbe7616: Test task manager (#196)

• Improvements in code coverage

## 1.5.1 Issues fixed in this release

- 153: Have de-client –print-product return different error message if product does not exist (18a950c)
- 171: yum update on decision engine rpm from python2 to python3 doesn't undo the symlinks (eb85c97)
- 188: Channel debug info now leaks into startup.log (99d20a5)
- 208: Error when trying to run reaper in version 1.4.0 (84eccf3)

## 1.5.2 Full list of commits since version 1.3

```
84eccf3: Fix typo in reaper script. (#209)
d836abf: next RC
926944a: Fix coveralls reporting (#198)
b95c323: Updating base Dockerfile (#199)
d302e31: Help jsonnet, which doesn't understand PosixPath objects. (#204)
2d791a7: Test configuration policies. (#197)
236e27a: Ensure items are returned in a stable order (#202)
e974f5f: add pylinit and pycodestyle (#203)
```

1.4. Release 1.4.1 7

```
686ca80 : require more recent version of pytest-postgresql (#195)
99d20a5 : Fix double-logging problem. (#192)
4ce3d17: A set of fixtures to simplify unit tests (#183)
65f8052 : Fix typo (#190)
f3a4be8: Protect against None workers (#187)
ec310fb: remove py3 from package name
7006489: bump version to 1.4.0rc
158d835 : decisionengine/framework/modules: Fix SourceProxy retries (#184)
1356bf1: Add support to test any branch in Jenkins (#182)
692fa8e : Add timeout support for unit test on Jenkins (#181)
e3d6e6a: Updated Jenkins documentation to take into account unit tests timeout parametr (#180)
2586a3e: Configuration redesign (#168)
fac984d: Fix error with DBUtils import. Looks like names of modules changed (#175)
7d661ee: Move postgres-specific implementation to postgres source. (#174)
eb85c97: Rpm (#173)
10fe843: Adding log rotation by time (#170)
a8d239b: Various improvements. (#167)
d9b92ee: Ignore vim's *.swp files (#166)
d9f72ef: Fix call to shutdown_timeout (and add sample entry to config) (#165)
3161795 : Add drops for items using tables being dropped (#164)
77d186d : Show output of test runtimes in travis (#163)
81820a4: Allow server to start with no channels. (#161)
49879a6 : DE server and client usability improvements (#160)
de91c4f: Add tests to default and override config (#158)
14df1f6: Use python fallthrough for options (#159)
ac64a92: Drop python 2.7 integration tests since we are python3 only (#157)
d963301: Update Jenkins pipeline to properly test closing PR (#156)
64248cb: Merge 'runtime' tests into running channel tests (#150)
065ad77: Adding Jenkins pipeline documentation (#155)
18a950c: fix print-product to report non-existing product as such (#154)
6493735 : Fix invalid attribute name (#152)
d953c6a: Remove unnecessary set_start_method call (#149)
c8c9b65 : guarantee that process is killed so test never hang (#147)
f1542b6: Channel test (#146)
7f349a8 : Fix faulty TaskManager state type (#145)
d50f1c4: fix logging regression introduced in f5e299969e0611e3480e9fa2782052df... (#142)
```

```
becfa26 : Pass the correct type. (#144)

1a60daf : DecisionEngine: fix typo (#143)

9e7b867 : Updating Jenkins pipeline configuration (#140)

e3a6703 : fix regression introduced in f5e299969e0611e3480e9fa2782052df86d7c4ed (#141)

4900bc6 : Restore runtime test. (#139)

0823f3d : Consolidate DE server/client tests into one file. (#138)

4f84435 : A few more access fixes.

160cfd1 : Fix task manager state access.

c00d819 : A few more cleanups.

ec087e2 : Various cleanups

a309ffe : Improvements to DE client CLI.
```

## 1.6 Release 1.3.0

In this release:

- · Introduced Jsonnet based configuration system
- · Improved logging
- Improved coverage of datasource

## 1.6.1 Full list of commits since version 1.2

```
239e82c : postgresql: improve SQL query (#133)
668eb1f: Update to make the code compatible with both python and JSON based config files (#129)
afd8837 : Configuration-manager fixes (#128)
571e2be: Remove pip installed system python packages
407d9ed: Update Dockerfile
1fefc69: Implement unit tests for datablock.py (#122)
43c8d7a: Adjust global configuration to include program-option values. (#126)
2840813 : Switch to Jsonnet configuration system (#125)
5c4ae0e: logging changes: added config file and command line interface (#124)
6697f22: Further config-manager testing and factorizations. (#123)
fa89fd0: Insulate multiprocessing test from parent environment. (#120)
139a537 : Allow empty base directory for log file. (#119)
f14d40c : Factorize configuration-loading steps. (#118)
e00afee: Enhance testing and error reporting of ConfigManager (#117)
c3d1be3: Python 3 upgrades. (#116)
e7399af: Header fix (#114)
```

1.6. Release 1.3.0 9

```
0456abf: Adding editor config file, see https://editorconfig.org/ (#115) 82112d1: Dockerfile: fetch osg 3.5 repo rpm (#113) 97c21b1: osg version 3.5 (#112) 33f28a8: Introduce jsonnet dependency (#110) 3f8b55e: improve server error handling (#108) f15588e: added 1.2.0 release notes b433325: Remove unnecessary 'main' functionality. (#107)
```

## 1.7 Release 1.2.0

#### In this release:

- Swithed to python3
- · Improved coverage
- · Database data retention: added reaper to remove data older than configurable number of days
- · Improved logging

## 1.7.1 decisionengine

```
3dfe167: Jenkins pipeline improvements (#106)
22a7073: pull request for review request 137 (#105)
cafffb2: Make it possible to run code directly (for tests), and (#100)
802e98b: replace psycog2 witt psycopg2-binary (#101)
573ce8f: Jenkins pipeline improvements (#99)
9d08835 : Run coveralls even under failed state (#97)
bc1df4b: Add tests for PostgreSQL datasource (#71)
c1ac391 : Fix missing py-modules.html (#96)
8dbfdee: Setup gh-pages doc workflow (#94)
cd4a01a : Doc (#93)
673080d: set version to 1.2.0 (for now). Supply conf file that corresponds to (#91)
f912225 : Db (#92)
dc8b68a: Add reaper to the RPC (#83) (#90)
29ade91: adding .Jenkinsfile with Jenkins pipeline configuration (#86)
c1dfe5c: Don't exclude E1004 from pylint, do exclude line breaks (#89)
440f949 : Fix varname (#88)
313d135 : Compress (#87)
6b8dc4b: Revert "Add reaper to the RPC (#83)"
dbea8e5: Update utils.sh so pytest will complete.
```

```
e848316: Update to postgresq111
7f4b805 : Add reaper to the RPC (#83)
0ba2c51: remove astpp module and depedencies it pulls in (#81)
6b8eab9: don't track test coverage of tests (#80)
Oda18ec: made reaper.py executable
aca24a3: make reaper.py executable, make symbolic link to it from /usr/bin (#72)
0202acf: Implementation of data reaper (#70)
16b6be1: Simple changes for Python 3 deployment (#69)
fd2418c: Fix warnings caught by PEP-8 Speaks.
d16359b: Python 3 (and other) simplications.
3c7b6b7: Only run Github Actions for python3.6 (#68)
453cbba: Update README.md
b27ed53: remove unnecessary (and atually harmful) python shebang (#66)
1.7.2 decisionengine modules
30d928b: clone version 1.2.0 of decisionengine
ae7c5a6: Jenkins pipeline improvements (#236)
310befd: T198 (#235)
a65886d: Fix import as reported in: https://github.com/HEPCloud/decisionengin... (#232)
93711cc: Run coveralls even if tests fail (#229)
03d763a: Jenkins pipeline improvements (#230)
f48d30f: Fix/223 (#228)
c8aa262 : github ticket 199 (#222)
0323bda: Address: https://github.com/HEPCloud/decisionengine_modules/issues/224 (#226)
62e4df6: Add support to run CI on Jenkins (#221)
5ab1541 : bump master version to 1.2.0 (for now) (#219)
bc19c65: decisionengine_modules/NERSC: Added retry loop for NERSC API Calls (#220)
41a50de: Sync up pep8speaks and run pylint.sh with decisionengine settings (#218)
db4634f : silence pylint error (#217)
1b95141: Fix whitespace around operator error
746ea38: ignore W503
8a8b5f4: remove unused variable
a6668bf: fix PEP8 warnings
13773ee: address pep8 warnings
6bea4ca: silence pylint error
```

1.7. Release 1.2.0

f589895: Pass sort=True parameter to fix future warning (#215)

a1d0507: fixing pep8 warning

a10bd17: debugging one import error

ec501ad: make coveralls.io links work

deab1a7 : T201 (#204) 69f2645 : Add coveragerc

6d8a5f5: decisionengine\_modules/NERSC: Make Nersc API call backward-compatible with old config (#196)

a7e0af9: Only run Github Actions for python3.6 (#24)

## 1.8 Release 1.1.0

#### In this release:

- Fixed. https://github.com/HEPCloud/decisionengine\_modules/issues/108 "Supply Postgres script to delete fields in main database before a certain date"
- significant code cleanup and pep8 compliance
- · unit test work
- CI (GitHub actions and Travis) is introduced

#### commits

f894b1d: Skip unittest (#77)

632e64b: Add ipython

f681a79: Make python 2.7 tests run on 1.1 branch

d6a32c0: implementation of data reaper (#75)

2ad8614: Use sparse checkout for first checkout to get .github/actions (#65)

812f032: Cat output of pytest log Exit pylint entrypoint with the line count of pep8 and pylint logs Deal with (detach

from ...) Only tar up (S)RPMS dirs for rpm build.

6b05ec7: Fix errors reported by run\_pylint (#62)

d9f5b66: Setup pep8speaks

c3b8ac2: Run github actions as non-root uid. Install packages in virtualenv and remove system rpms.

ae01f9e: Support Python 3 for Boost Python

579761c: Support Python 3 for Boost Python

044b979: Remove unnecessary using declarations.

00f6d00: Add extra header dependency due to Boost Python ommission.

24e0795 : Apply clang-format

17c17f9: Remove JSON dependency.

faa0b22: Massive cleanup.

07b555f: Updates to Github Actions to allow building with python3.6

fef6c11: Fix errors when running pylint.sh multiple times

da6f077: Autopep8 -i fixes

39fe5b3: TaskManager: fix calling log\_exception with correct number of arguments and minor format changes to reduce PEP8 warnings 17396da: logicengine: get rid of compuler warnings 01dc3d1: Only track what we need b609d73: Configure coveralls (and some minor cleanup) bd9ed5e: Many C++ cleanups 2a61876: Add Badges c864f27: Do not call pytest fixtures directly. 307db5f: white space fix 882b58f: fix unit tests 1da687c: Replace Boost facilities with C++ STL ones. 5a6e6b1: Run tests on push 8404245 : Add missing Boost regex library dependency. ceb5fe7: Apply clang-format to files that were missed earlier. 3de9940 : Apply clang-format to C++ code. 8a8f560: Cache venv directory instead ad017ce: Build private boost for testing 928c64a: Test pip cache 358939a: Adjust CMakeLists.txt files to use correct Python versions 9f0ddb3: Add pylint github action. 5e6ce4a: Remove more unused C++ files. 63717fe: Setup travis to use new cmake var 74fab2a: Use cmake argumement -DPYVER=3.6 to build python3 library https://fermicloud140.fnal.gov/reviews/r/ 31/ 843f30c: Minor cleanups per travis-lint a538cac: Remove unused C++ files. 4c9d125: Update repo where action is taken from 87fb2d9: Update rpms installed in docker image. Update entrypoint.sh to use cmake3. 199ee87: Find python3 libraries using cmake3 from epel rpm Also need to install python3-devel 4c79d2c: Remove unnused GNUmakefiles. 94342ee: Add unit test as a Github Action 1a0e102: more advanced travis.yml

1.8. Release 1.1.0

de8b0fa: python3 compliance: replace string.join() where appropriate, handle UserDict

0be413f: Add helper file for pip

2662e6c: note required packages

7005c78: Add simple target

7794327: Make recursive import happy

## decisionengine, Release 1.7.0rc0.post68+g95b0236

3b87119: Add missing header includes.

3e79b84: Remove defunct code and its tests

b1dbe1a: Ensure attribs are defined at init

c4ad78a: Correct logger arguments do avoid duplicate string parse

a8dcc67: Remove unused imports (per pylint)

d3502b5: Remove obsolete CVS directories.

d744111 : add six module to the list of required modules

0a9b1e8: Fix class declaration

b83157e: Handle metaclasses

549f33b : Add config for Travis CI

ee71044: Drop trailing white space

3f82af6: Python3 forward compatible syntax

28bf291 : Add safe (for python 2.7) python3 compatible syntax

1d1d76f: prepare for python3

# **DEVELOPER DOCUMENTATION**

**CHAPTER** 

**THREE** 

## **JENKINS CI PIPELINE**

# 3.1 Decisionengine CI with Jenkins pipeline

Jenkins dashboard with Decisionengine framework CI results is available here.

A CI build is triggered any time a PR is created/closed or a commit is made to an existing PR. There are also *nightly CI builds* to test a list of predefined branches.

The Jenkins pipeline runs *pylint* and *unit\_tests* test suites alongside the *rpmbuild* stage.

The Jenkins dashboard looks like this:

On the bottom left side there is the list of recent CI builds that are named after the PR or the branch tested. On the bottom right side the dashboard shows for each CI build detailed status for each test suite.

Hovering the mouse over the status box for each CI build stage, a tool-tip with a button to access log details shows up.

Next to the build number the symbol <sup>1</sup> gives access to a menu with the list of artifacts stored for that build. Those artifacts include logs and the tarball with RPMs.

From the panel on the left side it is possible to access the PR on GitHub by clicking on the PR icon that looks like this 1.4142.

On occasion it could be useful to trigger a manual CI build to test a branch on the official DE GitHub repository or on

the user fork. For this purpose, on the top left panel the user can click on the Build with Parameters button, and this panel shows up

# Pipeline decisionengine\_pipeline

This build requires parameters:

the user can modify these parameters to customize what code to test with the CI build.

The *DE\_REPO* parameter can point to the user fork or to the main repository.

The BRANCH parameter can point to the desired branch to test.

The PYTEST\_TIMEOUT parameter is the timeout in seconds for unit\_tests.

When ready, by clicking on the Build button, the CI build will start.

The pipeline configuration is part of the decisionengine repo.

## 3.1.1 Nightly CI build configuration

The nightly CI build for Decisionengine framework uses this Jenkins project that triggers a CI build using the Jenkins pipeline described above to test a list of predefined branches.

Branches to test are defined using the project matrix as shown in the picture below. Each branch in the list (here *master* and *1.4*) spawns an independent CI build.

In the *Build* section of the configuration it is set the list of Jenkins subprojects to be triggered, in this case we have *decisionengine\_pipeline* and *decisionengine\_modules\_pipeline*.

The *Parameters* text box is used to override parameters of each Jenkins subproject with a custom value. In total this Jenkins project triggers 4 CI builds, i.e. 2 branches X 2 Jenkins subprojects.

Finally the *Build Triggers* section is used to setup the schedule for the periodic build, in this case it is scheduled to run at about 2 AM.

Jenkins will choose the actual time depending on the actual load on the system.

#### **Module contents**

#### **Submodules**

## decisionengine.framework.config.ChannelConfigHandler module

Manager of channel configurations.

The ChannelConfigHandler manages only channel configurations and not the global decision-engine configuration. It is responsible for loading channel configuration files and validating that the channels have the correct configuration artifacts and inter-module product dependencies.

Bases: object \_load\_channel(a

\_load\_channel(channel\_name, path)

get\_channels()

## load\_all\_channels()

Load all channel configurations inside the stored channel-configuration directory.

Any cached configurations will be dropped prior to reloading.

## load\_channel(channel name)

Load a single configuration for a channel with the supplied name.

The behavior is to read a configuration file whose path is:

<cached channel config. dir>/{channel\_name}.jsonnet

where the cached channel-configuration directory was stored whenever the ChannelConfigHandler object was created, and {channel\_name} is the value of the supplied method argument.

```
print_channel_config(channel)
```

decisionengine.framework.config.ChannelConfigHandler.\_check\_keys(channel\_conf\_dict) check that channel config has mandatory keys:type data: dict

decisionengine.framework.config.ChannelConfigHandler.\_make\_de\_logger(global\_config)

## decisionengine.framework.config.ValidConfig module

ValidConfig represents a valid JSON document.

The decision engine requires each of its configuration files to be valid JSON. This is achieved by either supplying a valid Jsonnet or JSON document upfront, or by providing a Python dictionary that can be trivially converted to a JSON document.

Vetting of a file for JSON validity happens upon construction of a 'ValidConfig' object. A fully constructed 'Valid-Config' object thus corresponds to a valid JSON document.

 ${\bf class} \ \ {\bf decisionengine.framework.config.ValidConfig.ValidConfig} ({\it filename})$ 

Bases: collections.UserDict

ValidConfig represents a valid JSON configuration in the form of a dictionary.

In addition to the normal dictionary operations, users may call 'dump()' to print out in a string form the JSON configuration.

```
_abc_impl = <_abc._abc_data object>
dump()
```

Print dictionary data to a valid JSON string.

decisionengine.framework.config.ValidConfig.\_config\_from\_file(config\_file)

decisionengine.framework.config.ValidConfig.\_convert\_to\_json(config\_file)

Attempt to convert JSON non-compliant configuration into a compliant one.

This is a temporary facility to aid the migration of Python-based configurations to Jsonnet-based ones. Python dictionaries that are similar in structure to JSON documents are generally trivially convertible.

## decisionengine.framework.config.policies module

Decision-engine default configuration policies.

For the decision-engine process, the configuration policies are:

- The global configuration file must be named 'decision\_engine.jsonnet' and it must reside in (a) a directory that can be accessed through the 'CONFIG\_PATH' environment variable, or (b) the /etc/decisionengine directory.
- All channel configurations must reside in (a) a directory accessible through the 'CHANNEL\_CONFIG\_PATH' environment variable, or (b) a 'config.d' subdirectory of the /etc/decisionengine directory.

The utilities provided in this module provide simple means of accessing the configuration artifacts according to the policies listed above. Please consult the documentation for each function below for more detailed information.

```
decisionengine.framework.config.policies.channel_config_dir(parent_dir=None)

Retrieve the channel configuration directory as a pathlib.Path object.
```

This function returns a path object according to the following precedence rules:

- 1. If the 'parent\_dir' argument is provided, the returned path object will correspond to '{parent\_dir}/config.d'.
- 2. If the 'CHANNEL\_CONFIG\_PATH' environment variable has been set, the returned path object will correspond to \${CHANNEL\_CONFIG\_PATH}.
- 3. If neither 1 or 2 apply, the returned path object corresponds to '{global\_config\_dir()}/config.d' (see documentation for 'global\_config\_dir()').

Regardless of the precedence rule used, the returned path object must be a valid directory or an exception will be raised—i.e. if the 'parent\_dir' argument is supplied, and the resulting path object is not a valid directory, the function will exit with an exception and not attempt rule 2 or 3.

```
decisionengine.framework.config.policies.global_config_dir()
```

Retrieve global configuration dir as pathlib.Path object.

This is the directory that houses the 'decision\_engine.jsonnet' global configuration file.

This function checks that the 'CONFIG\_PATH' variable has been set or will use /etc/decisionengine otherwise. If the path exists as a directory, then the directory path is returned as a string; otherwise an exception is raised.

```
{\tt decisionengine.framework.config.policies.global\_config\_file} ({\it parent\_dir=None})
```

Return the pathlib.Path object corresponding to the global configuration.

If supplied, the 'parent\_dir' is assumed to be the full path corresponding to a directory containing the 'decision\_engine.jsonnet' file. If not provided, the global configuration directory is determined based on the behavior of the 'global\_config\_dir()' function.

An exception is raised if no 'decision\_engine.jsonnet' file is found.

decisionengine.framework.config.policies.valid\_dir(path, scope)

Throws if the supplied path object is not a directory, otherwise returns the path object.

#### **Module contents**

decisionengine.framework.dataspace package

### **Subpackages**

decisionengine.framework.dataspace.datasources package

#### **Subpackages**

decisionengine.framework.dataspace.datasources.tests package

#### **Submodules**

decisionengine.framework.dataspace.datasources.tests.fixtures module

pytest fixtures/constants

decisionengine.framework.dataspace.datasources.tests.fixtures.mock\_data\_block()
This fixture replaces the standard datablock implementation.

The current DataBlock implementation does not own any data products but forwards them immediately to a backend datasource. The only implemented datasource requires Postgres, which is overkill when needing to test simple data-product communication between modules.

This mock datablock class directly owns the data products, thus avoiding the need for a datasource backend. It is anticipated that a future design of the DataBlock will own the data products, thus making this mock class unnecessary.

## decisionengine.framework.dataspace.datasources.tests.test\_postgresql module

```
decisionengine.framework.dataspace.datasources.tests.test_postgresql.test_get_dataproducts(datasource,
                                                                                                taskman-
                                                                                                ager,
                                                                                                data)
decisionengine.framework.dataspace.datasources.tests.test_postgresql.test_get_last_generation_id(datasou

```

#### close()

Close all connections to the database

#### connect()

Create a pool of database connections

#### create\_tables()

Create database tables

#### delete\_data\_older\_than(days)

Delete data older that days interval :type days: int :arg days: remove data older than days interval

## duplicate\_datablock(taskmanager\_id, generation\_id, new\_generation\_id)

For the given taskmanager\_id, make a copy of the datablock with given generation\_id, set the generation\_id for the datablock copy

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **new\_generation\_id** (int) generation\_id of the new datablock created

#### get\_connection()

#### get\_datablock(taskmanager id, generation id)

Return the entire datablock from the dataproduct table for the given taskmanager\_id, generation\_id

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data

## get\_dataproduct(taskmanager\_id, generation\_id, key)

Return the data from the dataproduct table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

## get\_dataproducts(taskmanager\_id, key=None)

Return list of all data products associated with with taskmanager\_id

**Parameters key** (string) – data product key

### get\_header(taskmanager\_id, generation\_id, key)

Return the header from the header table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

## get\_last\_generation\_id(taskmanager\_name, taskmanager\_id=None)

Return last generation id for current task manager or taskmanager w/ task\_manager\_id.

#### **Parameters**

• name (string) – task manager name

• taskmanager\_id (string) - task manager id

#### get\_metadata(taskmanager\_id, generation\_id, key)

Return the metadata from the metadata table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

### get\_schema(table=None)

Given the table name return it's schema

Parameters table (string) - Name of the table

## get\_taskmanager(taskmanager\_name, taskmanager\_id=None)

Retrieve TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

## get\_taskmanagers(taskmanager\_name=None, start\_time=None, end\_time=None)

Retrieve TaskManagers :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager id: string :arg taskmanager id: id of taskmanager to retrieve

insert(taskmanager\_id, generation\_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager id for generation to be retrieved
- generation\_id (int) generation\_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

#### store\_taskmanager(name, taskmanager\_id)

Store TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

```
tables = {'dataproduct': ['taskmanager_id TEXT', 'generation_id INT', 'key TEXT',
'value BLOB'], 'header': ['taskmanager_id TEXT', 'generation_id INT', 'key TEXT',
'create_time REAL', 'expiration_time REAL', 'scheduled_create_time REAL', 'creator
TEXT', 'schema_id INT'], 'metadata': ['taskmanager_id TEXT', 'generation_id INT',
'key TEXT', 'state TEXT', 'generation_time REAL', 'missed_update_count INT'],
'schema': ['schema_id INT', 'schema BLOB']}
```

update(taskmanager\_id, generation\_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict

- header (Header) Header for the value
- header Metadata for the value

decisionengine.framework.dataspace.datasources.postgresql.generate\_insert\_query(table\_name, keys)

Generate insert query given table name and list of fields

#### **Parameters**

- table\_name (str) Name of the table to insert into
- **keys** List of column names

Keys list

**Return type** str - insert query

#### Module contents

                                                                    sequence id=None)
     Bases: object
     _insert(key, value, header, metadata)
          Insert a new product into database with header and metadata
     _setitem(key, value, header, metadata=None)
          put a product in the database with header and metadata
     _update(key, value, header, metadata)
          Update an existing product in the database with header and metadata
     duplicate()
          Duplicate the datablock and return this new DataBlock. The intent is that at the point the duplication occurs
          there is only information from the sources in the DataBlock. This also increments the generation id of this
          DataBlock.
          TODO: Also update the header and the metadata information TODO: Make this threadsafe
              Return type DataBlock
     get(key, default=None)
          Return the value associated with the key in the database
              Return type dict
```

```
get_dataproducts(key=None)
     get_header(key)
          Return the Header associated with the key in the database
              Return type Header
     get_metadata(key)
          Return the metadata associated with the key in the database
              Return type Metadata
     get_taskmanager(taskmanager_name, taskmanager_id=None)
          Retrieve TaskManager :type taskmanager_name: string :arg taskmanager_name: name of taskmanager
          to retrieve :type taskmanager_id: string :arg taskmanager_id: id of taskmanager to retrieve :rtype: :obj:
          dict
          The dictionary returned looks like: {'datestamp': datetime.datetime(2017, 12, 20, 17, 37, 17, 503210,
                  tzinfo=psycopg2.tz.FixedOffsetTimezone(offset=-360, name=None)),

          Create database tables
     dataproduct_table = 'dataproduct'
          Name of the dataproduct table
     abstract delete_data_older_than(days)
          Delete data older that interval :type days: long :arg days: remove data older than interval
```

### abstract duplicate\_datablock(taskmanager\_id, generation\_id, new\_generation\_id)

For the given taskmanager\_id, make a copy of the datablock with given generation\_id, set the generation\_id for the datablock copy

### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- new\_generation\_id (int) generation\_id of the new datablock created

### abstract get\_datablock(taskmanager\_id, generation\_id)

Return the entire datablock from the dataproduct table for the given taskmanager\_id, generation\_id

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data

## abstract get\_dataproduct(taskmanager\_id, generation\_id, key)

Return the data from the dataproduct table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

#### abstract get\_dataproducts(taskmanager id, key)

Return list of all data products associated with with taskmanager\_id

Parameters key (string) – data product key

# abstract get\_header(taskmanager\_id, generation\_id, key)

Return the header from the header table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value

### abstract get\_last\_generation\_id(name, taskmanager\_id=None)

Return last generation id for current task manager or taskmanager w/ task\_manager\_id.

#### **Parameters**

- **name** (string) task manager name
- taskmanager\_id (string) task manager id

# abstract get\_metadata(taskmanager\_id, generation\_id, key)

Return the metadata from the metadata table for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- generation\_id (int) generation\_id of the data
- **key** (string) key for the value

#### abstract get\_schema(table=None)

Given the table name return it's schema

**Parameters table** (string) – Name of the table

### abstract get\_taskmanager(taskmanager\_name, taskmanager\_id)

Retrieve TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

### abstract get\_taskmanagers(taskmanager\_name=None, start\_time=None, end\_time=None)

Retrieve TaskManagers :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

#### header\_table = 'header'

Name of the header table

#### abstract insert(taskmanager\_id, generation\_id, key, value, header, metadata)

Insert data into respective tables for the given taskmanager\_id, generation\_id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation\_id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- **header** Metadata for the value

### metadata\_table = 'metadata'

Name of the metadata table

# abstract store\_taskmanager(taskmanager\_name, taskmanager\_id)

Store TaskManager :type taskmanager\_name: string :arg taskmanager\_name: name of taskmanager to retrieve :type taskmanager\_id: string :arg taskmanager\_id: id of taskmanager to retrieve

### taskmanager\_table = 'taskmanager'

Name of the taskmanager table

### abstract update(taskmanager\_id, generation\_id, key, value, header, metadata)

Update the data in respective tables for the given taskmanager id, generation id, key

#### **Parameters**

- taskmanager\_id (string) taskmanager\_id for generation to be retrieved
- **generation\_id** (int) generation id of the data
- **key** (string) key for the value
- value (object) Value can be an object or dict
- header (Header) Header for the value
- header Metadata for the value

### decisionengine.framework.dataspace.dataspace module

```
class decisionengine.framework.dataspace.dataspace.DataSourceLoader(*args, **kwargs)
     Bases: object
     _ds = None
     static create_datasource(module_name, class_name, config)
class decisionengine.framework.dataspace.dataspace.DataSpace(config)
     Bases: object
     DataSpace class is collection of datablocks and provides interface to the database used to store the actual data
     _tables_created = False
          Description of tables and their columns
     close()
     delete(taskmanager_id, all_generations=False)
     duplicate_datablock(taskmanager_id, generation_id, new_generation_id)

### class decisionengine.framework.dataspace.dataspace.Singleton

Bases: type

Singleton pattern using Metaclass http://stackoverflow.com/questions/6760685/creating-a-singleton-in-python

\_instances = {}

### decisionengine.framework.dataspace.maintain module

## class decisionengine.framework.dataspace.maintain.Reaper(config)

Bases: object

Reaper provides functionality of periodic deletion of data older than retention\_interval in days

The class attributes indicate a rational set of defaults that shouldn't be altered by user configuration.

### MIN\_RETENTION\_INTERVAL\_DAYS = 7

### MIN\_SECONDS\_BETWEEN\_RUNS = 7080

```
_reaper_loop(delay)
```

The thread actually runs this.

reap()

Actually spawn the query to delete the old records. Lock the state as this task doesn't have a cancel option.

### property retention\_interval

We have data constraints, so use a property to track

### property seconds\_between\_runs

We have data constraints, so use a property to track

start(delay=0)

Start thread with an optional delay to start the thread in X seconds

stop()

Try to stop the reaper, will block if the reaper cannot be interupted.

#### **Module contents**

#### **Submodules**

# decisionengine.framework.engine.DecisionEngine module

Main loop for Decision Engine. The following environment variable points to decision engine configuration file: DECISION\_ENGINE\_CONFIG\_FILE if this environment variable is not defined the DE-Config.py file from the ``../tests/etc/ directory will be used.

Bases: socketserver.ThreadingMixIn, xmlrpc.server.SimpleXMLRPCServer

```
_dataframe_to_column_names(df)
_dataframe_to_csv(df)
_dataframe_to_json(df)
_dataframe_to_table(df)
_dataframe_to_vertical_tables(df)
_dispatch(method, params)
_ Dispatches the XML-RPC method.
```

XML-RPC calls are forwarded to a registered function that matches the called XML-RPC method name. If no such function exists then the call is forwarded to the registered instance, if available.

If the registered instance has a \_dispatch method then that method will be called with the name of the XML-RPC method and its parameters as a tuple e.g. instance.\_dispatch('add',(2,3))

If the registered instance does not have a \_dispatch method then the instance will be searched to find a matching method and, if found, will be called.

Methods beginning with an '\_' are considered private and will not be called.

```
block_until(state)
block_while(state)
get_logger()
handle_sighup(signum, frame)
reaper_start(delay)
reaper_status()
reaper_stop()
rm_channel(channel, maybe_timeout)
```

```
rpc_block_while(state_str)
     rpc_get_channel_log_level(channel)
     rpc_get_log_level()
     rpc_kill_channel(channel, timeout=None)
     rpc_print_product(product, columns=None, query=None, types=False, format=None)
     rpc_print_products()
     rpc_query_tool(product, format=None, start_time=None)
     rpc_reaper_start(delay=0)
          Start the reaper process after 'delay' seconds. Default 0 seconds delay. :type delay: int
     rpc_reaper_status()
     rpc_reaper_stop()
     rpc_rm_channel(channel, maybe_timeout)
     rpc_set_channel_log_level(channel, log_level)
          Assumes log_level is a string corresponding to the supported logging-module levels.
     rpc_show_config(channel)
          Show the configuration for a channel.
     rpc_show_de_config()
     rpc_start_channel(channel_name)
     rpc_start_channels()
     rpc_status()
     rpc_stop()
     rpc_stop_channel(channel)
     rpc_stop_channels()
     start_channel(channel name, channel config)
     start_channels()
     stop_channels()
     stop_worker(worker, timeout)
class decisionengine.framework.engine.DecisionEngine.RequestHandler(request, client_address,
                                                                           server)
     Bases: xmlrpc.server.SimpleXMLRPCRequestHandler
     rpc_paths = ('/RPC2',)
class decisionengine.framework.engine.DecisionEngine.StopState(value)
     Bases: enum. Enum
     An enumeration.
     Clean = 2
     NotFound = 1
     Terminated = 3
```

```
decisionengine.framework.engine.DecisionEngine._create_de_server(global_config, channel_config_loader)

Create the DE server with the passed global configuration and config manager

decisionengine.framework.engine.DecisionEngine._get_de_conf_manager(global_config_dir, channel_config_dir, options)

decisionengine.framework.engine.DecisionEngine._get_global_config(config_file, options)

decisionengine.framework.engine.DecisionEngine._start_de_server(global_config, channel_config_loader)

Create and start the DE server with the passed global configuration and config manager

decisionengine.framework.engine.DecisionEngine.main(args=None)

If args is None, sys.argv will be used instead If args is a list, it will be used instead of sys.argv (for unit testing)

decisionengine.framework.engine.DecisionEngine.parse_program_options(args=None)

If args is a list, it will be used instead of sys.argv
```

### decisionengine.framework.engine.Workers module

Class that encapsulates a channel's task manager as a separate process.

This class' run function is called whenever the process is started. If the process is abruptly terminated—e.g. the run method is pre-empted by a signal or an os.\_exit(n) call—the Worker object will still exist even if the operating-system process no longer does.

To determine the exit code of this process, use the Worker.exitcode value, provided by the multiprocessing.Process base class.

This class manages and provides access to the task-manager workers.

The intention is that the decision engine never directly interacts with the workers but refers to them via a context manager:

```
with workers.access() as ws: # Access to ws now protected ws['new_channel'] = Worker(...)
```

In cases where the decision engine's block\_while or block\_until methods must be called (e.g. during tests), one should used the unguarded access:

with workers.unguarded access() as ws: #

```
ws['new_channel'].wait_until(...)
     Calling a blocking method while using the protected context manager (i.e. workers.access()) will likely result in
     a deadlock.
     class Access(workers, lock)
          Bases: object
     _update_channel_states()
     access()
     unguarded_access()
decisionengine.framework.engine.de_client module
decisionengine.framework.engine.de_client.console_scripts_main(args_to_parse=None)
     This is the entry point for the setuptools auto generated scripts. Setuptools thinks a return from this function is
     an error message.
decisionengine.framework.engine.de_client.create_parser()
decisionengine.framework.engine.de_client.execute_command_from_args(argsparsed, de_socket)
     argsparsed should be from create_parser in this file
decisionengine.framework.engine.de_client.main(args to parse=None)
     If you pass a list of args, they will be used instead of sys.argv
decisionengine.framework.engine.de query tool module
decisionengine.framework.engine.de_query_tool.create_parser()
decisionengine.framework.engine.de_query_tool.execute_command_from_args(argsparsed,
                                                                                   de_socket)
     Calls the proper function for the arguments passed to de_query_tool.
          Parameters
                • argsparsed (Namespace) – Should be from create parser in this file.
                • de_socket (ServerProxy) – RPC Server Proxy.
          Returns Output of the command.
          Return type str
decisionengine.framework.engine.de_query_tool.main(args to parse=None)
     Main function for de_query_tool
          Parameters args_to_parse (list, optional) - If you pass a list of args, they will be used in-
              stead of sys.argv. Defaults to None.
          Returns Query result
          Return type str
```

#### **Submodules**

#### decisionengine.framework.logicengine.BooleanExpression module

### decisionengine.framework.logicengine.FactLookup module

Establishes a policy for looking up a fact based on the given name.

To wit, the first fact with a given name is the one that is used in the evaluation of all subsequent facts.

As an example, consider the following configuration:

```
facts: { should_publish: "(True)",
}, rules: {
    publish_1: { expression: "should_publish", facts: ["should_publish"]
    }, publish_2: {
        expression: "should_publish", actions: ["go_to_press"] facts: ["should_publish"]
    } retract: {
        expression: "not should_publish", facts: ["should_retract"]
}
```

In the above, the first fact to be evaluated will always be the top-level facts (i.e. those not encapsulated by the 'rules' table). The rules labeled 'publish\_1' and 'publish\_2' both rely on the 'should\_publish' fact in their expressions, and they in turn create their own facts with the same name. FactLookup ensures that 'publish\_1' and 'publish\_2' will both use the evaluated fact from the top-level 'facts' table.

```
rule_for(fact_name)
```

Selects rule required to evaluate fact with the supplied name.

```
Parameters fact_name (str) – Name of fact for which rule will be selected.

Return type str

Returns Rule name
```

```
sorted_rules(rules cfg)
```

Rules sorted according to rule dependencies.

```
Parameters rules_cfg (dict) – rules as specified in logic-engine configuration
```

Return type list

**Returns** Rules to be evaluated by the rule engine.

### decisionengine.framework.logicengine.LogicEngine module

```
class decisionengine.framework.logicengine.LogicEngine.LogicEngine(cfg)
     Bases: decisionengine.framework.modules.Module.Module
     _create_facts_dataframe(newfacts)
          Convert newfacts dict in format below to dataframe with columns ['rule name', 'fact name', fact value']
          facts dict format: 'newfacts': {
               'publish_glidein_requests': { 'allow_hpc_new': True, 'allow_foo': True
               }, 'dummy_rule': {
                   'dummy new fact': True
          }
     consumes()
          Return the names of all the items that must be in the DataBlock for the rules to be evaluated.
     evaluate(db)
          Evaluate our facts and rules, in the context of the given data. db can be any mappable, in particular a
          DataBlock or dictionary.
               Parameters db (DataBlock) – Products used to evaluate facts.
     evaluate_facts(db)
               Parameters db (DataBlock) – Products used to evaluate facts.
               Return type dict
               Returns Evaluated fact values (e.g. True or False) for each fact name.
     produces()
decisionengine.framework.logicengine.Rule module
class decisionengine.framework.logicengine.Rule.Rule(rule name, rule cfg)
     Bases: object
     In-memory representation of logic-engine rule, relying on parsing utilities in BooleanExpression.
     evaluate(evaluated_facts)
          Evaluates a compiled expression given the supplied facts.
               Parameters evaluated_facts (dict) - Initial fact values (e.g. True or False) for each fact
                   name.
               Return type bool
```

### decisionengine.framework.logicengine.RuleEngine module

Engine responsible for evaluating logic-engine rules.

This class is responsible for (a) forming a sorted set of rules that supports dependencies between them, and (b) evaluating the rules according to a specified fact-lookup policy.

execute(evaluated facts)

Evaluates all rules given the supplied facts.

**Parameters evaluated\_facts** (dict) – Initial fact values (e.g. True or False) for each fact name.

Return type tuple

**Returns** Actions to be taken based on rule evaluation; new facts produced during that evaluation.

Logger to use in all modules
decisionengine.framework.modules.de_logger.get_logger()
     get default logger - "decision_engine" :rtype: logging.Logger - rotating file logger
decisionengine.framework.modules.de_logger.set_logging(log_level, file_rotate_by,
                                                           rotation_time_unit='D', rotation_interval=1,
                                                           max backup count=6,
                                                           max\_file\_size=2000000000,
                                                           log_file_name='/tmp/decision_engine_logs/decision_engine_lo
```

**Parameters** 

- log\_level (str) log level
- **file\_rotate\_by** files rotation by size or by time
- rotation\_time\_unit (str) unit of time for file rotation
- rotation\_interval (int) time in rotation\_time\_units between file rotations
- log\_file\_name (str) log file name
- max\_file\_size (int) maximal size of log file. If reached save and start new log.
- max\_backup\_count (int) start rotaion after this number is reached

**Return type** logging.Logger - rotating file logger

decisionengine.framework.modules.de\_logger.set\_stream\_logging(logger\_name='decision\_engine')
This is for debugging. Set stream logging for logger.

Parameters logger\_name (str) – logger name

Return type logging.Logger

### decisionengine.framework.modules.describe module

process\_args()

### **Module contents**

### decisionengine.framework.taskmanager package

#### **Submodules**

### decisionengine.framework.taskmanager.ProcessingState module

The ProcessingState class can represent any of the following task-manager states:

### BOOT IDLE ACTIVE STEADY OFFLINE SHUTTINGDOWN SHUTDOWN ERROR

In addition, the class supports 'wait\_until(state)' and 'wait\_while(state)' methods, which, when called from a different process, block until the state has been entered or exited, respectively.

The 'RUNNING\_CONDITIONS' list is a list of states that a thread may have if it is started/starting. The 'STOPPING\_CONDITIONS' list is a list of states that a thread may have if it is stopped/stopping. The 'INAC-TIVE\_CONDITIONS' list is a list of states that a thread may have when it is not active

class decisionengine.framework.taskmanager.ProcessingState.ProcessingState(state=<State.BOOT:</pre>

```
0>)
Bases: object
This object tracks the state of a process.
A number of convience wrappers are provided.
Additionally you may use the .lock attribute for with block to lock the state during specific operations.
     This function is a minimally locking check to fetch the state.
has_value(state)
inactive()
property lock
probably_running()
set(state)
     This function will lock (and possibly block) to ensure a consistent change to the state value.
     This function can be blocked using the .lock to force state sync between threads if need be.
should_stop()
wait_until(state, timeout=None)
```

class decisionengine.framework.taskmanager.ProcessingState.State(value)

```
Bases: enum.Enum
```

wait\_while(state, timeout=None)

An enumeration.

```
ACTIVE = 2
BOOT = 0
ERROR = 7
IDLE = 1
OFFLINE = 6
```

```
SHUTTINGDOWN = 4
     STEADY = 3
decisionengine.framework.taskmanager.TaskManager module
Task Manager
class decisionengine.framework.taskmanager.TaskManager.Channel(channel_dict)
     Bases: object
     Decision Channel. Instantiates workers according to channel configuration
class decisionengine.framework.taskmanager.TaskManager.TaskManager(name, generation_id,
                                                                            channel_dict, global_config)
     Bases: object
     Task Manager
     data_block_put(data, header, data_block)
          Put data into data block
              Parameters
                  • data (dict) – key, value pairs
                  • header (Header) – data header
                  • data_block (DataBlock) - data block
     decision_cycle()
          Decision cycle to be run periodically (by trigger)
     do_backup()
          Duplicate current data block and return its copy
              Return type DataBlock
     get_consumes()
     get_loglevel()
     get_produces()
     get_state()
     get_state_name()
     get_state_value()
     run()
          Task Manager main loop
     run_logic_engine(data_block=None)
          Run Logic Engine.
              Parameters data_block (DataBlock) – data block
     run_publishers(actions, facts, data_block=None)
          Run Publishers in main process.
              Parameters data_block (DataBlock) – data block
```

SHUTDOWN = 5

```
run_source(src)
          Get the data from source and put it into the data block
              Parameters src (Worker) – source Worker
     run_transform(transform, data_block)
          Run a transform
              Parameters
                   • transform (Worker) - source Worker
                   • data_block (DataBlock) – data block
     run_transforms(data_block=None)
          Run transforms. So far in main process.
              Parameters data_block (DataBlock) – data block
     set_loglevel_value(log_level)
          Assumes log_level is a string corresponding to the supported logging-module levels.
     start sources(data block=None)
          Start sources, each in a separate thread
              Parameters data_block (DataBlock) – data block
     take_offline(current_data_block)
          offline and stop task manager
     wait_for_all(events_done)
          Wait for all sources or transforms to finish
              Parameters events_done (list) – list of events to wait for
     wait_for_any(events_done)
          Wait for any sources to finish
              Parameters events_done (list) – list of events to wait for
class decisionengine.framework.taskmanager.TaskManager.Worker(conf_dict, base_class)
     Bases: object
     Provides interface to loadable modules an events to sycronise execution
decisionengine.framework.taskmanager.TaskManager._create_module_instance(config dict,
                                                                                      base_class)
     Create instance of dynamically loaded module
decisionengine.framework.taskmanager.TaskManager._find_only_one_subclass(module, base class)
     Search through module looking for only one subclass of the supplied base_class
```

decisionengine.framework.taskmanager.TaskManager.\_make\_workers\_for(configs, base class)

### decisionengine.framework.taskmanager.module\_graph module

```
Ensure no circularities in produces and consumes.

decisionengine.framework.taskmanager.module_graph._consumed_products(*worker_lists)

decisionengine.framework.taskmanager.module_graph._produced_products(*worker_lists)

decisionengine.framework.taskmanager.module_graph.ensure_no_circularities(sources, transforms, publishers)

DOCSTRING
```

decisionengine.framework.tests.TransformWithMissingProducesConsumes module
class decisionengine.framework.tests.TransformWithMissingProducesConsumes.TransformWithMissingProducesConsumes.
     Bases: decisionengine.framework.modules.Transform.Transform
     transform(data_block)
decisionengine.framework.tests.WorkingSourceProxy module
class decisionengine.framework.tests.WorkingSourceProxy.WorkingSourceProxy(config)
     Bases: decisionengine.framework.modules.SourceProxy.SourceProxy
     acquire()
          Overrides Source class method
decisionengine.framework.tests.fixtures module
defaults for pytest
decisionengine.framework.tests.fixtures.DEServer(conf_path=None, conf_override=None,
                                                       channel_conf_path=None,
                                                       channel_conf_override=None, host='127.0.0.1',
                                                       port=None, pg_prog_name='PG_PROG',
                                                       pg\_db\_conn\_name='DE\_DB')
     A DE Server using a private database
decisionengine.framework.tests.fixtures.DE\_DB(request: \_pytest.fixtures.FixtureRequest) 
ightarrow
                                                   psycopg2.extensions.connection
     Fixture factory for PostgreSQL.
          Parameters request (FixtureRequest) – fixture request object
          Returns postgresql client
decisionengine.framework.tests.fixtures.PG_PROG(request: _pytest.fixtures.FixtureRequest,
                                                      tmpdir\_factory: \_pytest.tmpdir.TempdirFactory) \rightarrow
                                                      pytest_postgresql.executor.PostgreSQLExecutor
     Process fixture for PostgreSQL.
          Parameters request (FixtureRequest) – fixture request object
          Return type pytest_dbfixtures.executors.TCPExecutor
          Returns tcp executor
```

### decisionengine.framework.tests.test\_client\_errors module

Fixture based DE Server tests of the sample config

decisionengine.framework.tests.test\_client\_errors.test\_client\_cannot\_wait\_on\_bad\_state(deserver) Verify wait is for a valid state

### decisionengine.framework.tests.test client server module

```
Fixture based DE Server for the de-client tests
```

```
decisionengine.framework.tests.test_client_server.test_client_print_product(deserver)
```

decisionengine.framework.tests.test\_client\_server.test\_client\_status\_msg\_to\_stdout(deserver)

Make sure the actual client console call goes to stdout

### decisionengine.framework.tests.test defaults module

Fixture based DE Server tests of the sample config

decisionengine.framework.tests.test\_defaults.test\_client\_can\_get\_de\_server\_show\_channel\_logger\_level(des Verify unknown channel has NOTSET

decisionengine.framework.tests.test\_defaults.test\_client\_de\_config\_is\_json(deserver)

Verify config can be fetched in json format

decisionengine.framework.tests.test\_defaults.test\_global\_channel\_log\_level\_in\_config(deserver) Verify global\_channel\_log\_level setting exists

#### decisionengine.framework.tests.test module program options module

```
decisionengine.framework.tests.test_module_program_options.test_acquire_for_sources()
decisionengine.framework.tests.test_module_program_options.test_config_templates()
decisionengine.framework.tests.test_module_program_options.test_descriptions()
decisionengine.framework.tests.test_module_program_options.test_help()
decisionengine.framework.tests.test_module_program_options.test_module_alias()
```

#### decisionengine.framework.tests.test query tool server module

```
Fixture based DE Server for the de-query-tool tests
```

```
decisionengine.framework.tests.test_query_tool_server.test_query_tool_csv(deserver)

decisionengine.framework.tests.test_query_tool_server.test_query_tool_default(deserver)

decisionengine.framework.tests.test_query_tool_server.test_query_tool_invalid_product(deserver)

decisionengine.framework.tests.test_query_tool_server.test_query_tool_json(deserver)

decisionengine.framework.tests.test_query_tool_server.test_query_tool_since(deserver)
```

#### decisionengine.framework.tests.test reaper module

Fixture based DE Server for the reaper tests

- decisionengine.framework.tests.test\_reaper.test\_client\_can\_get\_de\_server\_reaper\_start\_delay(deserver)

  Verify reaper can start with delay
- decisionengine.framework.tests.test\_reaper.test\_client\_can\_get\_de\_server\_reaper\_status(deserver)

  Verify reaper status
- decisionengine.framework.tests.test\_reaper.test\_client\_can\_get\_de\_server\_reaper\_stop(deserver)

  Verify reaper can stop

### decisionengine.framework.tests.test restart channel module

```
decisionengine.framework.tests.test_restart_channel.deserver_mock_data_block(mock_data_block)
decisionengine.framework.tests.test_restart_channel.test_restart_channel(deserver_mock_data_block)
```

### decisionengine.framework.tests.test sample config module

Fixture based DE Server tests of the defaults

Verify client can get channel products

- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_double\_set\_de\_server\_channel\_log\_leve Verify set log level to current level isn't an error
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_de\_server\_channel\_config(deserver) Verify config has expected items
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_de\_server\_channel\_log\_level(deserver) Verify can fetch log level for a channel
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_de\_server\_show\_config(deserver) Verify config has expected items

decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_de\_server\_show\_logger\_level(deserver)

- Verify can fetch log level decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_de\_server\_status(deserver)
- Verify channel enters stable state decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_products(deserver)
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_get\_products\_no\_channels(deserver)

  Verify client can get channel products even when none are run
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_kill\_one\_channel(deserver) Verify client can kill a single channel
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_kill\_one\_channel\_force(deserver) Verify client can kill a single channel with force
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_kill\_one\_channel\_timeout(deserver)

  Verify client can kill a single channel with timeout
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_set\_de\_server\_channel\_log\_level(deserver) Verify set log level for a channel

```
decisionengine.framework.tests.test_sample_config.test_client_can_start_all_channel(deserver) Verify client can start all channel
```

- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_start\_one\_channel(deserver) Verify client can start a single channel
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_stop\_channels(deserver) Verify client can stop channels
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_stop\_one\_channel(deserver) Verify client can stop a single channel
- decisionengine.framework.tests.test\_sample\_config.test\_client\_can\_stop\_server(deserver) Verify de-client can run -stop
- decisionengine.framework.tests.test\_sample\_config.test\_client\_cannot\_double\_start(deserver) Verify client cannot double start channels
- decisionengine.framework.tests.test\_sample\_config.test\_client\_get\_non\_real\_channel(deserver) Verify config for missing channel does what it should
- decisionengine.framework.tests.test\_sample\_config.test\_client\_start\_non\_real\_channel(deserver) Verify start for missing channel does what it should
- decisionengine.framework.tests.test\_sample\_config.test\_client\_stop\_non\_real\_channel(deserver) Verify stop for missing channel does what it should

#### decisionengine.framework.tests.test source proxy module

Fixture based tests of the SourceProxy module.

```
decisionengine.framework.tests.test_source_proxy.test_stop_failing_source_proxy(deserver_fail) decisionengine.framework.tests.test_source_proxy.test_working_source_proxy(deserver)
```

### decisionengine.framework.tests.test start with bad channels module

```
Fixture based DE Server tests of invalid channel configs
```

```
decisionengine.framework.tests.test_start_with_bad_channels._consumes_not_subset(test_str)
decisionengine.framework.tests.test_start_with_bad_channels._expected_circularity(test_str)
decisionengine.framework.tests.test_start_with_bad_channels._missing_consumes(name)
decisionengine.framework.tests.test_start_with_bad_channels._missing_produces(name)
decisionengine.framework.tests.test_start_with_bad_channels.test_client_can_get_products_no_channels(design)
```

Verify client can get channel products even when none are run

### decisionengine.framework.tests.test\_start\_with\_no\_channels module

Fixture based DE Server tests of the server without channels, then with them decisionengine.framework.tests.test\_start\_with\_no\_channels.deserver\_mock\_data\_block(mock\_data\_block) decisionengine.framework.tests.test\_start\_with\_no\_channels.test\_start\_from\_nothing(deserver\_mock\_data\_block)

#### **Module contents**

### decisionengine.framework.util package

#### **Submodules**

# decisionengine.framework.util.fs module

```
decisionengine.framework.util.fs.files_with_extensions(dir_path, *extensions)

Return all files in dir_path that match the provided extensions.
```

If no extensions are given, then all files in dir\_path are returned.

Results are sorted by channel name to ensure stable output.

### decisionengine.framework.util.reaper module

A stand-alone script purges data in database older than specified in configuration. Configuration file has to have this bit added:

```
{
    "dataspace" [{ "retention_interval_in_days"][365,]
          "datasource" : { ... }
    }
}
```

Can be used in a cron job.

decisionengine.framework.util.reaper.main()

### decisionengine.framework.util.sockets module

decisionengine.framework.util.sockets.get\_random\_port()

### decisionengine.framework.util.subclasses module

decisionengine.framework.util.subclasses.\_derived\_class(cls, base\_class)
Only matches subclasses that are not equal to the base class.

decisionengine.framework.util.subclasses.all\_subclasses(module, base\_class)
Return all of a module's subclasses of the given base class.

#### Module contents

#### **Submodules**

# decisionengine.framework.about module

PEP-0396 provides instructions for providing module versions While we are at it, add a few other useful bits

### decisionengine.framework.version module

#### **Module contents**

### decisionengine.tests package

### **Submodules**

# decisionengine.tests.test\_framework\_package module

Make sure decisionengine.framework is a valid python package decisionengine.tests.test\_framework\_package.test\_can\_import()
